Data in many forms

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered. Data are available on the Internet, compact disc, diskette, computer printouts, microfiche and microfilm, and magnetic tape. Maps and other geographic reference materials are available for some types of data. Direct online access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable database and retrieval system.

How to obtain more information

Inquiries about this publication and related statistics or services should be directed to: Labour Force Survey Section, Household Surveys Division, Statistics Canada, Ottawa, Ontario, K1A 0T6 (telephone: (613) 951-9448) or to the Statistics Canada Regional Reference Centre in:

Halifax Montréal	, /	426-5331 283-5725	Regina Edmonton	()	780-5405 495-3027

Standards of service to the public

To maintain quality service to the public, Statistics Canada follows established standards covering statistical products and services, delivery of statistical information, cost-recovered services and services to respondents. To obtain a copy of these service standards, please contact your nearest Statistics Canada Regional Reference Centre.

Des données sous plusieurs formes

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes. Les données sont disponibles sur Internet, disque compact, disquette, imprimé d'ordinateur, microfiche et microfilm, et bande magnétique. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toute demande de renseignements au sujet de la présente publication ou au sujet de statistiques ou de services connexes doit être adressée à : Section de l'enquête sur la population active, Division des enquêtes-ménages, Statistique Canada, Ottawa, Ontario, K1A 0T6 (téléphone : (613) 951-9448) ou à l'un des centres de consultation régionaux de Statistique Canada :

Note of appreciation

Canada owes the success of its statistical system to a long-standing co-operation involving Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued co-operation and goodwill.

Note de reconnaissance

Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises, les administrations canadiennes et les autres organismes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.

THIS PUBLICATION WAS PREPARED UNDER THE DIRECTION OF:

Mike Sheridan, Director General, Labour and Household Surveys Branch

Mike Sheridan, Director (Acting), Household Surveys Division (613) 951-9480

Doug Drew, Manager, Labour Force Survey Subdivision (LFS), Household Surveys Division (613) 951-4720

LFS Unit Heads:

- Jean-Marc Lévesque, Information and Current Analysis (613) 951-2301
- Ross McOrmond, Data Processing
- Royal Généreux, Processing
- John Rowland, Operation Analysis and Development Unit

with the assistance of the staff members of Labour Force Survey Sub-division.

OTHER SOURCES OF LABOUR FORCE SURVEY DATA

CANSIM

Most of the data published in <u>The Labour Force</u> (catalogue 71-001-XPB) and in <u>Historical Labour Force Statistics</u> (catalogue 71-201-XPB) are also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). Users interested in accessing data via CANSIM should contact one of Statistics Canada's regional centres at the numbers listed on the inside front cover of this publication, or contact <u>the Marketing Division</u>, Statistics Canada, R.H. Coats Building, Ottawa, Ontario, K1A 0T6 (613) 951-8200.

Unpublished Data:

Some data not contained in this publication are also available from the Labour Force Survey Sub-division, on request. There may be a charge for some of these requests.

Microdata Tapes:

Data are available on microdata tapes monthly at a cost of \$300.00 per month. Contact Labour Force Survey Sub-division.

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences - Permanence of Paper for Printed Library Materials, ANSI Z39.48 - 1984.

CETTE PUBLICATION A ÉTÉ PRÉPARÉ SOUS LA DIRECTION DE:

Mike Sheridan, Directeur général, Direction des enquêtes-ménages et du travail

Mike Sheridan, Directeur (Intérim), Division des enquêtes-ménages (613) 951-9480

Doug Drew, Gestionnaire, Sous-division de l'enquête sur la population active (EPA), Division des enquêtes-ménages (613) 951-4720

Les chefs d'unité de l'EPA:

- Jean-Marc Lévesque, Information et analyse courante (613) 951-2301
- Ross McOrmond, Traitement des données
- Royal Généreux, Traitement
- John Rowland, Élabaration et analyse des opérations

avec l'aide du personnel de la sous-division de l'enquête sur la population active.

AUTRES SOURCES DES DONNÉES DE L'ENQUÊTE SUR LA POPULATION ACTIVE

CANSIM

La plupart des données publiées dans La population active (n°71-001-XPB au catalogue) et Statistiques chronologiques sur la population active (n°71-201-XPB au catalogue) peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les utilisateurs voulant obtenir des chiffres par l'intermédiaire de CANSIM peuvent contacter un des centres de consultation de Statistique Canada dont les numéros de téléphone figurent au verso du couvert de cette publication ou en communiquant directement avec la Division du marketing, Statistique Canada, Immeuble R.H. Coats, Ottawa, Ontario, K1A 0T6 (613) 951-8200.

Données non publiées:

Certaines données non publiées dans cette publication sont aussi offertes, sur demande, par la sous-division de l'enquête sur la population active. Certaines demandes peuvent nécessiter des frais.

Bandes de micro-données:

Des bandes magnétiques de micro-données mensuelles sont disponibles pour un prix de 300 \$ par mois. Contacter la sous-division de l'enquête sur la population active.

Le papier utilisé dans la présente publication répond aux exigences minimales de l'"American National Standard for Information Sciences" - "Permanence of Paper for Printed Library Material", ANSI Z39.48 - 1984.

1996 - A TEN YEAR PERSPECTIVE

Geoff Bowlby, Economist Labour Force Survey Household Surveys Division Telephone: (613) 951-3325

Fax: (613) 951-2869 E-mail: bowlgeo@statcan.ca

Overview

1996 was an interesting year in terms of employment, unemployment and labour force participation. First of all, employment increased by an estimated 186,000 from December 1995 to December 1996, representing growth of 1.4%, the second best annual increase in the last five years. This growth was in-line with the average increase over the current recovery. Despite this, 1996's increase was weaker when compared to the employment growth reached in the late 1980's, a period against which Canadians often gauge current labour market conditions. From 1987 to 1989, employment increases averaged 323,000 (or 2.6%) per year.

Still, 1996 was better than 1995 as employment grew twice as fast. In 1995, the level of employment changed little at the beginning of the year but increased near the end, setting the trend for the first quarter of 1996. This trend disappeared in the second and third quarters of 1996, a period of unsure labour market activity where monthly increases in the estimates of employment were mostly offset by equally large decreases in other months. The last quarter of 1996, however, saw consistent monthly employment increases. However, the 1.4% employment growth was not enough to compensate for the 1.5% growth of the working-age population. Hence, the employment rate dropped from 58.6% in December 1995 to 58.5% at the end of 1996.

While employment increased at a pace that was higher in 1996 than the year previous, the number of people who were unemployed grew by 62,000 from December 1995 to December 1996, the first time since 1992 that unemployment has increased on a year-to-year basis. By contrast, the number of unemployed dropped by 13,000 in 1995, 225,000 in 1994 and 10,000 in 1993.

The unemployment rate rested near 10% for a good part of 1996. The rate started at 9.6% in January 1996 and dipped early in the second quarter, only to jump to 10% in June. It remained close to that level for the rest of the year, except for a brief reprise in August. It closed the year at 9.7%, slightly above the level registered a year before.

Aperçu

Par rapport à la décennie écoulée, 1996 a été une année intéressante aux chapitres de l'emploi, du chômage et de l'activité sur le marché du travail. Tout d'abord, le nombre d'emplois a augmenté d'environ 186 000 entre décembre 1995 et décembre 1996, soit une croissance de 1,4 %, la deuxième augmentation annuelle en importance des cinq dernières années. Une telle croissance se compare à la croissance moyenne de la reprise. Malgré cela, la croissance de 1996 a été plus faible par rapport à l'augmentation du nombre d'emplois que l'on a connue à la fin des années 80, période par rapport à laquelle les Canadiens évaluent souvent les conditions actuelles du marché du travail. De 1987 à 1989, le nombre d'emplois a augmenté en moyenne de 323 000 (2,6 %) par année.

Néanmoins, en 1996, l'emploi a augmenté à un rythme deux fois plus rapide qu'en 1995, année pendant laquelle, d'un mois à l'autre, la croissance de l'emploi n'a pratiquement pas changé au début, mais a augmenté vers la fin, déterminant la tendance pour le premier trimestre de 1996. Cette tendance a disparu aux deuxième et troisième trimestres de 1996, période marquée par une activité incertaine sur le marché du travail et au cours de laquelle les augmentations mensuelles de l'estimation de l'emploi étaient annulées par des diminutions également importantes dans d'autres mois. Toutefois, le dernier trimestre de 1996 a enregistré des augmentations mensuelles constantes. Par ailleurs, la croissance de 1,4 % du nombre d'emplois était plus faible que la croissance de 1,5 % de la population. Le taux d'emploi est donc tombé de 58,6 % en décembre 1995 à 58,5 % à la fin de 1996.

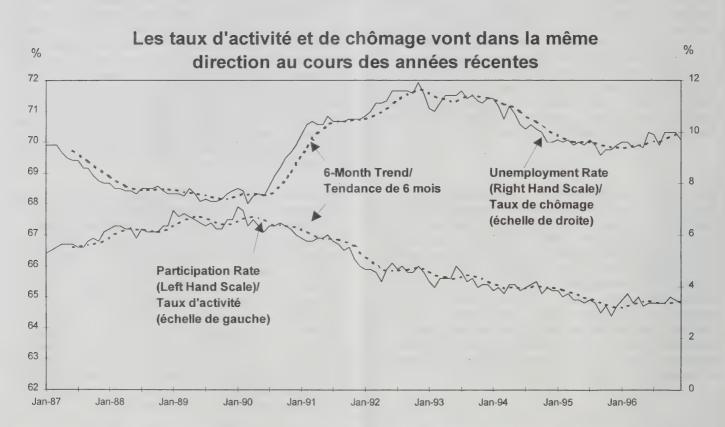

Alors que le nombre d'emplois augmentait à un plus grand rythme que l'année précédente, le nombre de chômeurs a fait un bond de 62 000 entre décembre 1995 et décembre 1996. C'était la première fois depuis 1992 que le chômage augmentait d'une année à l'autre. Comparativement, le nombre de chômeurs a chuté de 13 000 en 1995, 225 000 en 1994 et 10 000 en 1993.

Le taux de chômage s'est maintenu à près de 10 % pour une bonne partie de 1996. Le taux de chômage, qui se situait à 9,6 % en janvier, a fléchi au début du deuxième trimestre, mais a grimpé à 10 % en juin. Il s'est maintenu à près de ce niveau pour le reste de l'année, sauf pour une brève diminution en août. Il a terminé l'année à 9,7 %, soit légèrement audessus du niveau enregistré l'année précédente.

From 1993 to 1995, the unemployment rate dropped each year despite poor employment growth. Instead of employment growth, the falling unemployment rate was largely due to a decline in labour force participation. In 1996, this changed as the increase in the unemployment rate was the result of a greater number of entrants to the labour market. In 1996, there was a relatively large increase in the labour force. By year-end, the number of people working or looking for work had increased by 1.7%, the largest yearly increase since 1990. As a result, the labour force participation rate increased for the first time in seven years, from 64.7% in 1995 to 64.8% in 1996.

De 1993 à 1995, le taux de chômage a diminué chaque année malgré une croissance assez faible du niveau d'emploi. La baisse du taux de chômage était en grande partie due à un fléchissement de l'activité et non pas à une croissance de l'emploi. En 1996, ceci s'est renversé, le taux de chômage remontant à la suite d'une croissance de l'activité. En 1996, la population active a augmenté de façon relativement importante. À la fin de l'année, le nombre de personnes travaillant ou cherchant du travail avait augmenté de 1,7 %, soit la plus importante augmentation annuelle depuis 1990. En conséquence, le taux d'activité a progressé pour la première fois en sept ans passant de 64,7 % en 1995 à 64,8 % en 1996.

Participation and Unemployment Rates Move in Tandem in Recent Years

Goods-Producing Sector Performed Well

Industries in the economy can be broken into two broad categories - goods-producing industries and service-producing industries. Over the years, the goods-producing industries have displayed a much more cyclical employment pattern compared to the service-producing sector.

From 1989 to 1992, goods-producing employment fell each year by an average of 125,000. The downward trend reversed in 1993 as employment increased very slightly (0.4% or 13,000). In 1994, it jumped 6.0% (+207,000) before falling 1% (-36,000) in 1995. In 1996, growth returned as the number of jobs in the goods-producing industries increased 2.9% (+105,000), about the same increase experienced in 1988.

Bonne performance du secteur des biens

On peut répartir l'ensemble des branches d'activité dans deux grands groupes : le secteur des biens et le secteur des services. Pour ce qui est du changement relatif de l'emploi annuel, les deux groupes ont donné des résultats différents, l'emploi dans le secteur des biens étant beaucoup plus cyclique au fil des ans.

De 1989 à 1992, le nombre d'emplois dans le secteur des biens a diminué chaque année en moyenne de 125 000. Cette tendance à la baisse s'est renversée en 1993 alors que l'emploi a augmenté très légèrement (0,4 % ou 13 000). En 1994, il a fait un bond de 6,0 % (+207 000), puis a chuté de 1 % (-36 000) en 1995. En 1996, le nombre d'emplois augmentant de 2,9 % dans le secteur des biens (+105 000), soit une hausse relative similaire à celle enregistrée en 1988.

Service-producing employment, meanwhile, has increased in downturns as well as expansions. However, 1996 growth of 0.8% (+81,000) was the lowest since 1991. In 1990, services-producing employment increased by only 0.7%, followed by an increase of 0.5% the next year.

How did employment in specific industries perform recently compared to the last ten years? The goods-producing sector includes manufacturing (56.4% of all goods-producing employment), construction (19.5%), agriculture (12.7%), other primary industries (7.6%) and utilities (3.8%). In 1996, manufacturing employment grew 3% (+62,000), weaker than 1994 growth of 6.6% but still characterized as a good performance. Construction, despite poor performance in the middle months of the year, ended 1996 roughly where it began the year. Employment in the construction industry remains 15% below its March 1990 peak. Agricultural jobs increased in 1996 at a rate not seen in the last 10 years. There were 7.3% (+32,000) more people working in the agriculture sector at the end of the year.

The services-producing industries consist of the community, business and personal services industry (51.5% of all services employment), trade (23.7%), transportation, storage and communications (8.5%), public administration (8.2%) and finance, insurance and real estate (8.1%). While employment growth was relatively poor for all industries in the services-producing sector in 1996, what stood out was growth of only 1% in community, business and personal services (CBPS), the smallest gain in this industry since 1990, a recession year. CBPS growth was weakened by falling employment in educational services (-1.7%) and little change in health and social services. The drop in educational services offsets a 2.6% increase in business and personal services.

While the important CBPS sector had relatively weak employment growth, there is an interesting employment trend developing in the retail and wholesale trade industry. For the first time in the 1990's, retail and wholesale trade has seen two consecutive years of growth. In 1995, it improved by 2.2%, followed by an increase of 1.8% in 1996. Employment in the transportation, storage and communication industry dropped by 5% in 1996, following three years of steady growth.

Par ailleurs, dans le secteur des services, le nombre d'emplois a augmenté tant pendant les périodes de recul que pendant celles d'expansion. Toutefois, la croissance de 0,8 % (+81 000) de 1996 était la plus faible depuis 1991. En 1990, le nombre d'emplois dans le secteur des services n'a augmenté que de 0,7 %, puis de 0,5 % l'année suivante.

Quelle a été la performance des diverses branches d'activité de ces grands groupes par rapport aux dix dernières années? Le secteur des biens comprend les industries manufacturières (56,4 % de tous les emplois du secteur), la construction (19,5 %), l'agriculture (12,7 %), les autres branches du secteur primaire (7,6 %) et les services publics (3,8 %). En 1996, le nombre d'emplois dans les industries manufacturières a augmenté de 3 % (+62 000), ce qui est inférieur à l'augmentation de 6,6 % en 1994, mais tout de même une bonne performance. La construction, malgré une piètre performance en mi-année, a terminé 1996 sensiblement au même point qu'elle l'avait commencée. L'emploi dans la construction demeure à 15 % sous le sommet de mars 1990. Pour ce qui est de l'agriculture, le nombre d'emplois a augmenté en 1996 à un rythme que l'on n'avait pas connu au cours des dix dernières années. En effet, le nombre de personnes travaillant dans ce secteur avait augmenté de 7,3 % (+32 000) à la fin de l'année.

Le secteur des services comprend les services sociaux-culturels, commerciaux et personnels (51,5 % de tous les emplois du secteur), le commerce (23,7 %), le transport, l'entreposage et les communications (8,5 %), l'administration publique (8,2 %), les finances, les assurances et les affaires immobilières (8,1 %). Bien que la croissance de l'emploi ait été piètre dans tous les branches du secteur des services en 1996, elle a été principalement limitée par la plus faible augmentation (1 %) à survenir dans les services sociaux-culturels, commerciaux et personnels (SSCCP) depuis 1990, année de récession. La croissance des SSCCP a été ralentie par une diminution de l'emploi dans l'enseignement (-1,7 %) et le peu de changement dans la santé et les services sociaux. La baisse dans l'enseignement a annulé la hausse de 2,6 % dans les services personnels et aux entreprises.

Tandis que l'important secteur des SSCCP connaissait une croissance de l'emploi relativement faible, une tendance intéressante de l'emploi se dessinait dans l'industrie du commerce de gros et de détail. Pour la première fois dans les années 90, le commerce de gros et de détail a connu deux années consécutives de croissance. La croissance de 2,2 % en 1995 a été suivie d'une augmentation de 1,8 % en 1996. Enfin, l'emploi dans les transports, l'entreposage et les communications, a chuté de 5 % en 1996 à la suite de trois années de croissance continue.

Employment Growth in the West, Declines in the East

Employment growth occurred only west of Quebec in 1996. Ontario and the four western provinces each recorded an increase in the number of jobs while Quebec and the four Atlantic provinces experienced employment decreases. The changes in employment levels in Saskatchewan (0.7%), Prince Edward Island (-0.3%) and Quebec (-0.6%), however, were minor.

Employment growth in Canada was led by the two most westerly provinces in 1996. It reached 4.3% (+76,000) in British Columbia, the strongest increase since 1989 for that province, capping ten years of steady employment growth. About one-third of the net growth in BC came from a large increase in trade employment (+27,000) mostly occurring in the second half of the year.

At 4% (+55,000), Alberta's employment growth was close to that of BC mainly because of an impressive jump in manufacturing jobs. Over the year, manufacturing employment increased steadily each month in Alberta. Both Alberta and Manitoba experienced the best year in a decade for employment growth. Growth in Manitoba ended the year at 3.9% (+20,000).

Employment growth in Ontario was more modest, at 1.4% (+77,000), matching the national rate of growth. While employment in the important community, business and personal services industry grew only 1% in 1996, jobs in good-producing industries expanded by 4% on the strength of good performance between June and October. Despite this increase, at the end of 1996, Ontario still had 11% fewer people employed in goods-producing industries than in late 1989 when employment in these industries peaked.

While nationally, employment growth was stronger in 1996 than in 1995, 1996 was worse for Quebec and all four Atlantic provinces. In Quebec, while gains were made at the beginning of the year, larger losses during the summer were only partly recovered later in the year, leaving employment down somewhat.

Croissance de l'emploi dans l'Ouest, diminution dans l'Est

La croissance nette de l'emploi ne s'est matérialisée qu'à l'ouest du Québec en 1996. L'Ontario et les quatre provinces de l'Ouest ont chacune connu une augmentation du nombre d'emplois tandis que le Québec et les quatre provinces maritimes enregistraient des diminutions de l'emploi. Toutefois, les fluctuations du nombre d'emplois en Saskatchewan (0,7 %), à l'Île-du-Prince-Édouard (-0,3 %) et au Québec (-0,6 %) étaient minimes.

Ce sont les deux provinces le plus à l'ouest du Canada qui ont enregistré les plus importantes croissances du nombre d'emplois en 1996. En Colombie-Britannique, l'augmentation de l'emploi a atteint 4,3 % (+76 000), la plus forte hausse depuis 1989 pour cette province, ce qui couronnait dix années de croissance continue de l'emploi. Près du tiers de la croissance nette en Colombie-Britannique est attribuable à une importante augmentation de l'emploi dans le commerce (+27 000) qui est survenue surtout au cours de la deuxième moitié de l'année.

L'Alberta suivait de près la Colombie-Britannique avec une croissance de l'emploi de 4 % (+55 000), principalement en raison d'un fort bond dans les industries manufacturières. Au cours de l'année, l'emploi dans ce secteur a augmenté de façon continue à chaque mois. L'Alberta et le Manitoba ont connu leur meilleure année de la décennie au chapitre de la croissance de l'emploi. À la fin de l'année, le Manitoba affichait une hausse de 3,9 % (+20 000).

En Ontario, l'augmentation du nombre d'emplois a été plus modeste, 1,4 % (+77 000), égalant le taux de croissance national. Tandis que l'emploi dans l'importante branche des services sociaux-culturels, commerciaux et personnels augmentait de seulement 1 % en 1996, le nombre d'emplois dans le secteur des biens a crû de 4 %, suite à une forte croissance entre juin et octobre. Malgré cette augmentation, le nombre d'emplois dans le secteur des biens dans cette province est toujours inférieur de 11 % au sommet atteint vers la fin de 1989.

Bien que la croissance de l'emploi au pays se soit améliorée en 1996 par rapport à 1995, la situation au Québec et dans les quatre provinces de l'Atlantique a été moins bonne en 1996. Au Québec, après que des gains au début de l'année aient été effacés par des pertes plus élevées au cours de l'été, l'emploi a repris quelque peu sa progression, terminant l'année sous un niveau légèrement inférieur à l'année précédente.

Prince Edward Island, also after four years of improvement, saw employment drop slightly. In Nova Scotia, another upward trend reversed as employment decreased 1.6%. Following very strong growth of 7.2% in 1994, employment has declined in New Brunswick in the last two years (-1.3% in 1995 and -2.5% in 1996). Newfoundland had the sharpest employment decline (-3.0%), its second largest drop in the last decade. Job losses in Newfoundland were concentrated in transportation, storage and communication (-3,000), and construction (-3,000).

Youths Continue on a Dismal Job Path

Youth employment has dropped over most of the recovery. Even in 1993 and 1994, when youth employment increased, growth was far below the overall rate. This downward trend continued in 1996, as the number of 15-24 year olds who had a job dropped 1% (-21,000). By the end of 1996, the youth unemployment rate stood at 16.4%, nearly double that of adults (8.5%). As a result, the ratio of the youth unemployment rate to that of adults ended 1996 at 1.93, slightly less than in 1995 (1.96) but still very high in a ten-year perspective.

Much has happened to youth employment and participation rates over the last ten years. In the late 1980's, youth employment and participation rates approached and sometimes surpassed the general monthly rates. They now remain much lower. The youth employment rate stood at 51.1% in 1996, considerably lower than the 1988 peak of 62%. Meanwhile, only 61.2% of youths were participating in the labour force compared to 70% in the late 1980's.

Adult Women Gain in Part-Time Work, Men Gain in Full-time Jobs

From December 1989 to December 1991, employment dropped 289,000 in Canada, mostly among full-time jobs. In the four years that followed, three quarters of the jobs that were created were full-time, although almost all of the full-time gain came in one year, 1994. In 1996, full-time jobs increased 123,000 compared to 63,000 in part-time. Despite smaller absolute gains, the percentage increase in part-time work has exceeded that of full-time jobs in recent years. From 1992 to 1996, while full-time jobs increased 5.8%, the number of people employed part-time has grown by 9.6%.

L'Île-du-Prince-Édouard, elle aussi, a connu une légère diminution du nombre d'emplois après quatre années d'augmentation. La Nouvelle-Écosse a également connu un renversement de la tendance à la hausse de l'emploi et a enregistré une baisse de 1,6 %. Quant au Nouveau-Brunswick, après une très forte croissance de 7,2 % en 1994, le nombre d'emplois a fléchi au cours des deux dernières années (-1,3 % en 1995 et -2,5 % en 1996). Pour sa part, Terre-Neuve, a enregistré la plus importante diminution relative (-3 %) du nombre d'emplois, connaissant sa deuxième diminution en importance de la dernière décennie. Les pertes d'emplois dans cette province se trouvaient surtout dans les transports, l'entreposage et les communications (-3 000) et la construction (-3 000).

Le triste marché de l'emploi pour les jeunes se poursuit

Le nombre d'emplois pour les jeunes a diminué au cours de presque toute la période de reprise. Même en 1993 et 1994, alors que le nombre d'emplois a augmenté chez les jeunes, leur taux de croissance était beaucoup plus faible que le taux global. Cette tendance à la baisse s'est continuée en 1996 alors que le nombre de jeunes ayant un emploi diminuait de 1 % (-21 000). À la fin de 1996, le taux de chômage chez les jeunes s'élevait à 16,4 %, soit près du double de celui des adultes (8,5 %). Le rapport du taux de chômage des jeunes sur celui des adultes se fixait donc à 1,93 à la fin de 1996, légèrement sous celui de 1995 (1,96), demeurant cependant très élevé comparé aux rapports observés au cours des dix dernières années.

Au cours de la dernière décennie, il s'est produit beaucoup de choses en ce qui a trait aux taux d'activité et d'emploi chez les jeunes. Avant la récession, les taux d'activité et d'emploi chez les jeunes se situaient près des taux mensuels généraux, et parfois les dépassaient. Maintenant, ils demeurent beaucoup plus bas. Le taux d'emploi chez les jeunes s'élevait à 51,1 % en 1996, ce qui est considérablement moins que le sommet de 62 % atteint en 1988. Par ailleurs, seulement 61,2 % des jeunes faisaient partie de la population active par rapport à 70 % à la fin des années 80.

Les femmes adultes gagnent des emplois à temps partiel, les hommes, des emplois à temps plein

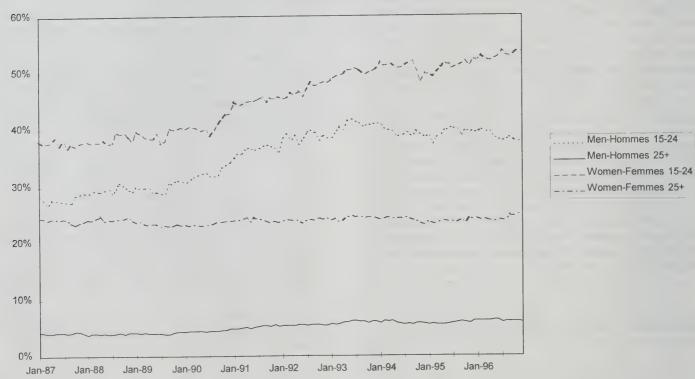

De décembre 1989 à décembre 1991, l'emploi a chuté de 289 000 au Canada, cette chute étant concentré dans les emplois à temps plein. Dans les quatre années qui ont suivi, les trois quarts des emplois créés étaient des emplois à temps plein, bien que la grande partie de cette création d'emplois à temps plein se soit produite en 1994. En 1996, l'emploi à temps plein augmentait de 123 000 comparé à 63 000 dans le temps partiel. En dépit de gains absolus moins élevés, la croissance en pourcentage du travail à temps partiel était plus forte que celle de la croissance du travail à temps plein au cours des années récentes. De 1992 à 1996, alors que le travail à temps plein augmentait de 5,8 %, le nombre de personnes travaillant à temps partiel a augmenté de 9,6 %.

In 1996, much of the increase in part-time employment came as the result of an increase in part-time jobs held by adult women (+83,000 or +6.7%), accounting for almost all of the adult women employment increase (+106,000 or 2.1%). Meanwhile, the number of women 15-24 years old holding part-time jobs increased 1.9%. This brought the part-time employment rate (i.e. the percentage of employed women with part-time jobs) among young women to 53.7%, its highest level in the last 10 years. Youths in Canada were very likely to be working part-time. Although they made up only 17% of the population, they represented 35% of all persons having a part-time jobs.

En 1996, une grande partie de la hausse de l'emploi à temps partiel provenait de l'accroissement du temps partiel chez les femmes adultes. En effet, le temps partiel augmentait de 83 000 (6,7 %) chez ce groupe, composant la grande partie de la hausse totale (106 000) de leur niveau d'emploi. Pendant ce temps, le nombre de jeunes femmes âgées de 15 à 24 ans ayant un emploi à temps partiel augmentait de 1,9 %. Le taux de temps partiel (pourcentage de personnes occupées ayant un emploi à temps partiel) chez les jeunes femmes augmentait à 53,7 %, le plus haut taux au cours des derniers dix ans. Les jeunes au Canada, avaient de fortes probabilités d'avoir un emploi à temps partiel. Bien qu'ils ne représentaient que 17 % de la population, ils formaient 35 % des personnes ayant des emplois à temps partiel.

Part-time Employment Rate Reaches Ten-Year High For Women

Le taux de temps partiel chez les femmes atteint un sommet des dix dernières années

Net job gains by adult men were all full-time (+101,000 or 1.8%). Since 1993, the proportion of adult men with jobs who were working part-time has held steadily around 6%.

Par ailleurs, la croissance de l'emploi chez les hommes adultes était concentrée dans le temps plein (+101 000 ou 1,8 %). Depuis 1993, la proportion des hommes adultes ayant un emploi qui travaillaient à temps partiel a tourné autour de 6 %.

Gender Gap Shrinks for Unemployment and Participation Rates

Over the last ten years, the unemployment and participation rates of men have changed greatly compared to those of women. Men ended 1996 with a slightly higher unemployment rate than women (10% vs. 9.5%). While men have had a higher rate throughout the 1990's, the gap has been lessening since it peaked at 1.6 percentage points in 1991.

The participation rate for men, which had been decreasing since 1987, held steady at 72.4% in 1996. The women's rate, meanwhile, increased in the late 1980's and dropped very slightly from 1990 to 1995. In 1996, the downward trend also reversed for women as their participation rate increased 0.2 percentage points to 57.5%. This increase in the overall female rate was due to a 0.9 percentage point increase among the core age group, those aged 25 to 54 years.

Summary

Compared to the last five years, employment growth in 1996 was better than most years and matched the average rate of growth in the current recovery. Thanks to stronger employment growth in the western provinces and in the goodsproducing industries, employment increased at twice the rate of 1995. Meanwhile, the participation rate increased for the first time in seven years on the heals of the largest annual labour force increase since 1987.

In earlier years of the recovery, the unemployment rate trended slowly downwards, with employment growth having no significant impact on this movement. Instead, the drop in the rate was the result of declining labour market participation. In contrast, the unemployment rate rose slightly in 1996, as a result of the large increase in labour force participation and employment growth that did not quite keep with that of the population.

In 1996, three other important labour market trends were noticed. First of all, youth employment continued to fall. Today, those who are 15-24 years old are much less likely to be working or be members of the labour force than before the recession. Secondly, growth in part-time employment was faster than full-time due to strong part-time employment growth among adult women. Finally, as in recent years, the gap in unemployment and participation rates among men and women continued to narrow.

Les écarts entre les taux de chômage et d'activité chez les hommes et les femmes diminuent

Au cours des dix dernières années, les taux de chômage et d'activité chez les hommes ont changé considérablement par rapport à ceux des femmes. À la fin de 1996, le taux de chômage chez les hommes était légèrement supérieur (10,0 %) à celui des femmes (9,5 %). Bien que les hommes aient eu un taux plus élevé au cours des années 90, l'écart n'a cessé de diminuer chaque année depuis 1991, année où il était le plus considérable à 1,6 point de pourcentage.

Le taux d'activité des hommes, en déclin depuis 1987, est demeuré stable à 72,4 % en 1996. D'autre part, le taux d'activité chez les femmes qui s'était accru à la fin des années 80, a régressé légèrement entre 1990 et 1995. En 1996, cette tendance à la baisse s'est arrêtée alors que le taux augmentait légèrement de 0,2 % à 57,5 %. Cette croissance de l'activité chez les femmes était concentrée chez les femmes du groupe noyau, c'est-à-dire celles âgées de 25 à 54 ans.

Résumé

Par rapport aux cinq dernières années, la croissance de l'emploi en 1996 a été meilleure que la plupart des autres années égalant la croissance moyenne de la période de reprise. Grâce à une plus forte croissance du nombre d'emplois dans les provinces de l'Ouest et dans le secteur des biens, le nombre d'emplois a augmenté à un rythme deux fois plus rapide qu'en 1995. Entre temps, le taux d'activité est remonté pour la première fois en sept ans à la suite de la plus forte progression de la population active depuis 1987.

Au cours des premières années de la reprise, le taux de chômage déclinait lentement, la progression de l'emploi ayant peu d'impact sur cette tendance. La baisse du taux de chômage résultait du déclin du taux d'activité. En 1996, ces tendances se sont renversées, le taux de chômage augmentant à la suite d'une hausse du taux d'activité et d'un taux de croissance de l'emploi moindre que celui de la population.

On note trois autres tendances importantes sur le marché du travail de 1996. Premièrement, l'emploi chez les jeunes a continué de diminuer et les jeunes, aujourd'hui, sont beaucoup moins susceptibles de travailler ou de faire partie de la population active qu'ils ne l'étaient avant la récession. Deuxièmement, le travail à temps partiel a progressé plus rapidement que le travail à temps plein grâce à la forte progression du temps partiel chez les femmes adultes. Finalement, comme au cours des dernières années, l'écart entre le taux de chômage et le taux d'activité des hommes et des femmes s'est rétréci.

APPENDIX

The Labour Force Survey

The statistics contained in this report are based on information obtained through a sample survey of households. Interviews are carried out in about 52,000 representative households across the country (excluding the Yukon and Northwest Territories), involving some 96,000 respondents.

The Labour Force Survey, started in November 1945, was taken at quarterly intervals until November 1952. It has been carried out monthly since then. The information generated by the survey has expanded considerably over the years with a major redesign of the survey content in 1976 and again in 1997, and provides a rich and detailed picture of the Canadian labour market. Details of the lates changes are available in a document entitled "The Labour Force Survey: Development of a new questionnaire for 1997, found on the Internet under Research Papers in the virtual library of Statistics Canada (www.statcan.ca). Details of these changes are available on request from the Labour Force Survey Sub-Division, Statistics Canada, Ottawa, K1A 0T6.

The sample used in the Labour Force Survey has been designed to represent all persons in the population 15 years of age and over residing in the provinces of Canada, with the exception of the following: persons living on Indian reserves, full-time members of the armed forces and people living in institutions (for example, inmates of penal institutions and patients in hospitals or nursing homes who have resided in the institution for more than 6 months).

Monthly estimates of employment, unemployment and persons not in the labour force refer to the specific week covered by the survey each month, normally the week containing the 15th day.

For detailed information on the methodology of the Labour Force Survey, see the publication Methodology of the Canadian Labour Force Survey (cat. 71-526).

For detailed information on the LFS questionnaire, see the document Guide to the Labour Force Survey on the 1996 Labour Force Historical Review on CD- ROM, or in the Statistics Canada virtual library on the World Wide Web.

Collecting the Data

Data collection is carried out during the week following the reference week. Statistics Canada interviewers contact each of the households in the sample through personal and/or telephone interviews to obtain the information needed to produce the labour force data. As mentioned earlier, there are approximately 52,000 households interviewed each month. Once a household is selected, it remains in the sample for a period of six months. Each interviewer contacts approximately 75 designated dwellings (the individual assignment size varies by type of area) and conducts a personal interview in all dwellings where interviews are being conducted for the first time. In most areas, provided the respondent agrees, subsequent interviews may be conducted by telephone, an interview technique which has been shown to have no discernable impact on the data and which offers significant savings in time and cost.

Definitions and Explanations

Labour Force

The labour force is composed of those members of the civilian non-institutional population 15 years of age and over who, during the reference week, were employed or unemployed.

APPENDICE

L'enquête sur la population active

Les statistiques publiées ici sont fondées sur une enquête mensuelle menée auprès d'environ 52 000 ménages représentatifs d'un bout à l'autre du Canada, soit quelque 96 000 répondants (à l'exception du Yukon et des Territoires du Nord-Quest)

L'enquête sur la population active, lancée en novembre 1945, a eu lieu tous les trois mois jusqu'à novembre 1952. Depuis lors, elle a lieu tous les mois. L'information générée par l'enquête s'est considérablement accrue au cours des années grâce à un remaniement majeur de l'enquête en 1976, suivi d'un autre en 1997, et fournit une image riche et détaillée du marché du travail canadien. Les détails concernant les derniers changements se trouvent dans le document «L'Enquête sur la population active: élaboration d'un nouveau questionnaire pour 1997», disponible sur Internet sous Documents de recherche dans la Bibliothèque virtuelle de Statistique Canada (www.statcan.ca). On peut obtenir des détails sur ces changements en s'adressant à la Sous-division de l'enquête sur la population active, Statistique Canada, Ottawa, K1A 0T6.

L'échantillon retenu aux fins de l'enquête sur la population active représente toutes les personnes de 15 ans et plus résidant dans les provinces du Canada, à l'exception des personnes vivants dans des réserves indiennes, des membres à plein temps des Forces armées et des pensionnaires d'institutions (par exemple les détenus de prison et les malades séjournant à l'hôpital ou dans une maison de repos pour plus de 6 mois).

Les estimations mensuelles de l'emploi, du chômage et des inactifs se rapportent à une semaine bien précise chaque mois, soit normalement celle où tombe le quinzième jour du mois.

Pour des renseignements d'ordre méthodologique de l'Enquête sur la population active, veuillez consulter la publication intitulée <u>Méthodologie de l'Enquête sur la population active du Canada</u> (nº 71-526 au catalogue).

Des renseignements détaillés sur le questionnaire de l'EPA sont contenus dans le document <u>Guide de l'Enquête sur la population active</u> dans la version de 1996 du CD-ROM, ou encore dans la bibliothèque virtuelle de Statistique Canada sur le World Wide Web.

La collecte des données

La collecte des données a lieu au cours de la semaine qui suit la semaine de référence. Les intervieweurs de Statistique Canada communiquent avec les occupants de chacun des ménages de l'échantillon, en personne et (ou) par téléphone, afin de recueillir les renseignements nécessaires pour produire les données sur la population active. Tel que décrit ci-dessus, environ 52 000 ménages sont interviewés chaque mois. Lorsqu'un ménage est choisi, il demeure dans l'échantillon pour une durée de six mois. Chaque intervieweur se met en contact avec les occupants d'environ 75 logements choisis (la tâche individuelle varie selon le genre de région). Lorsqu'il s'agit d'un ménage interviewé pour la première fois, l'intervieweur fait une visite sur place. Dans la majorité des régions, les interviews subséquentes peuvent être réalisées par téléphone, à condition que l'enquêté y consente; cette technique ne semble pas avoir d'effet marqué sur les données et elle permet d'épargner beaucoup de temps et d'argent.

Définitions et explications

Population active

La population active comprend les membres de la population civile hors institution âgés de 15 ans et plus qui avaient un emploi (personnes occupées) ou étaient en chômage pendant la semaine de référence.

Employed

Employed persons are those who, during the reference week:

- a) did any work (see note below) at all
- b) had a job but were not at work due to:
- own illness or disability
- personal or family responsibilities
- labour dispute
- vacation
- other reason not specified above (excluding persons on layoff, between casual jobs, and those with a job to start at a future date.

Note:

Work includes any work for pay or profit, that is, paid work in the context of an employer-employee relationship, or self-employment. It also includes unpaid family work where unpaid family work is defined as unpaid work which contributed directly to the operation of a farm, business or professional practice owned by a related member of the household

Employed full-time

A person is considered to be employed full-time if his/her usual hours at the main job are greater than 29 hours per week.

Employed part-time

When the number of hours worked at the main job is usually less than 30 hours per week then he/she is considered to be employed part-time.

Unemployed

Unemployed persons are those who, during the reference week:

- were without work, had actively looked for work in the past four weeks (ending with reference week), and were available for work (see note below);
- had not actively looked for work in the past four weeks but had been on layoff (see note below) and were available for work;
- c) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from the reference week, and were available for work.

Notes:

- Persons in this group meeting the following criteria are regarded as available:
- were full-time students seeking part-time work who also met condition (ii) below. (Full-time students looking for full-time work are classified as not available for work in the reference week.)
- ii. reported that there was no reason why they could not take a job in reference week, or if they could not take a job it was because of "own illness or disability", "personal or family responsibilities", or "already had a job".
- Persons are classified as being on temporary layoff only when they expect to return to the job from which they were laid off.

Personnes occupées

Les personnes occupées sont celles qui, au cours de la semaine de référence:

- a) ont fait un travail (voyez la note en bas) quelconque
- avaient un emploi mais n'étaient pas au travail pour l'une des raisons suivants:
- maladie ou invalidité (de l'enquêté)
- obligations personnelles ou familiales
- conflit de travail
- vacance:
- autre raison non précisée ci-dessus (n'inclut pas les personnes mises à pied, celles qui étaient inactives entre deux emplois occasionnels et celles qui avaient un emploi devant commencer à une date ultérieure).

Note:

On entend par "travail" tout travail fait contre rémunération ou en vue d'un bénéfice, c'est-à-dire le travail fait contre rémunération pour un employeur ou à son propre compte. Il peut également s'agir d'un travail familial non rémunéré, c'est-à-dire d'un travail non rémunéré qui contribue directement à l'exploitation d'une ferme, d'une entreprise ou d'un bureau professionnel, qui est possédé ou exploité par un membre apparenté du ménage.

L'emploi à temps plein

Une personne est considérée comme un employé à temps plein si elle travaille habituellement plus de 29 heures par semaine à son emploi principal.

L'emploi à temps partiel

Une personne est considérée comme un employé à temps partiel si elle travaille habituellement moins de 30 heures par semaine à son emploi principal.

Chômeurs

Les chômeurs sont les personnes qui, au cours de la semaine de référence:

- étaient sans emploi, avaient activement cherché du travail au cours des quatre dernières semaines (y compris la semaine de référence) et étaient prêtes à travailler (voyez la note en bas);
- n'avaient pas activement cherché de travail au cours des quatre dernières semaines, mais avaient été mises à pied (voir la note en bas) et étaient prêtes à travailler;
- n'avaient pas activement cherché de travail au cours des quatre dernières semaines, mais devaient commencer un nouvel emploi dans quatre semaines ou moins à compter de la semaine de référence, et étaient prêtes à travailler.

Notes:

- 1. On considère comme prêtes à travailler les personnes de ce groupe qui:
- Étudiaient à plein temps tout en cherchant du travail à temps partiel et qui répondaient au critère (ii) ci-dessous. (Les étudiants à plein temps qui cherchaient du travail à plein temps ne sont pas considérés comme ayant été prêts à travailler pendant la semaine de référence).
- ii. Ont déclaré qu'il n'y avait aucune raison pour laquelle elles ne pouvaient prendre un emploi pendant la semaine de référence ou ne pouvaient en prendre un en raison "de maladie ou invalidité", "d'obligations personnelles ou familiales", ou "parce qu'elles avaient déjà un emploi".
- On considère comme mises à pied temporaire les personnes qui s'attendent à réintégrer l'emploi qu'elles occupaient avant d'être mises à pied.

Not in the Labour Force

Those persons in the civilian non-institutional population 15 years of age and over who, during the reference week, were neither employed nor unemployed.

Unemployment Rate

The unemployment rate represents the number of unemployed persons expressed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, marital status, etc.) is the number unemployed in that group expressed as a percentage of the labour force for that group.

Participation Rate

The participation rate represents the labour force expressed as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, marital status, etc.) is the labour force in that group expressed as a percentage of the population for that group.

Employment Rates (formely the Employment/ Population Ratio)

The employment rate represents the number of persons employed expressed as a percentage of the population 15 years of age and over. The employment rate for a particular group (age, sex, marital status, etc.) is the number employed in that group expressed as a percentage of the population for that group.

Part-time Rate

The part-time rate represents the number of persons employed part-time expressed as a percentage of the employed. The part-time rate for a particular group (age, sex, marital status, etc.) is the number employed part-time in that group expressed as a percentage of the employed for that group.

Industry and Occupation

The Labour Force Survey provides information about the occupation and industry attachment of persons employed. Since 1984, these statistics have been based on the 1980 Standard Occupational Classification and the 1980 Standard Industrial Classification. Prior to 1984, the 1971 Occupation Classification Manual and the 1970 Standard Industrial Classification were used.

The Labour Force Survey also provides information about the occupation and industry attachment of persons unemployed and not in the labour force who have held a job in the past twelve months.

Family Status

A family is defined as "a group of two or more persons who are living together in the same dwelling and who are related by blood, marriage or adoption". A person living alone or who is related to no one else in the dwelling where he/she lives is classified as an "unattached individual". The head of a family is determined by the respondent's perception of headship and as such is solely a statistical device which has no economic connotation. (A more detailed description of the derivation of family data is available on request.)

Rounding

Estimates published by the Labour Force Survey are rounded to the nearest hundreds and expressed in thousands but all derived values (totals, averages, rates, ratios...) are calculated from unrounded figures, except for seasonally adjusted estimates. Therefore, the sum of individual rounded items may not equal the total.

Inactifs

Il s'agit de la partie de la population civile hors institution âgée de 15 ans et plus qui était ni occupée ni en chômage pendant la semaine de référence.

Taux de chômage

Le taux de chômage représente le nombre de chômeurs exprimé en pourcentage de la population active. Le taux de chômage d'un groupe particulier (âge, sexe, état matrimonial, etc.) est le nombre de chômeurs dans ce groupe, exprimé en pourcentage de la population active dans le même groupe.

Taux d'activité

Le taux d'activité représente la population active exprimée en pourcentage de la population de 15 ans et plus. Le taux d'activité d'un groupe particulier (âge, sexe, état matrimonial, etc.) est la population active dans ce groupe exprimée en pourcentage de la population dans le même groupe.

Taux d'emploi (antérieurement nommé rapport emploi-population)

Le taux d'emploi représente le nombre de personnes occupées exprimé en pourcentage de la population de 15 ans et plus. Le taux d'emploi d'un groupe particulier (âge, sexe, état matrimonial, etc.) est le nombre de personnes occupées dans ce groupe, exprimé en pourcentage de la population dans le même groupe.

Taux de temps partiel

Le taux de temps partiel représente le nombre de personnes occupées à temps partiel exprimé en pourcentage du nombre de personnes occupées. Le taux de temps partiel d'un groupe particulier (âge, sexe, état matrimonial, etc.) est le nombre de personnes occupées à temps partiel dans ce groupe, exprimé en pourcentage du nombre de personnes occupées dans le même groupe.

Branche d'activité et profession

L'enquête sur la population active fournit des renseignements sur la profession et la branche d'activité des personnes occupées. Depuis 1984 ces statistiques sont fondées sur la Classification type des professions de 1980 et sur la Classification type des industries de 1980. Avant 1984, les données étaient groupées selon la Classification des professions du recensement de 1971 et la Classification des activités économiques de 1970.

L'Enquête procure également des renseignements sur la profession et la branche d'activité des chômeurs et de la population inactive qui ont occupé un emploi au cours des douze derniers mois.

La situation familiale

Une famille est "un groupe de deux personnes ou plus qui vivent ensemble dans le même logement et qui sont apparentées par le sang, le mariage ou l'adoption". Une personne qui vit seule ou qui n'est apparentée à aucun occupant du logement où il (elle) demeure est classée comme "personne seule". On établit qui est le "chef de famille" en demandant à l'enquêté qui est, selon lui, la personne qui joue ce rôle. Ce concept n'a aucune connotation économique; il ne s'agit que d'un mécanisme statistique. (On peut obtenir sur demande une description plus détaillée du calcul des données sur les familles.)

Arrondissement

Les estimations publiées par l'enquête sur la population active sont publiées en milliers et arrondies en centaines mais toutes les valeurs dérivées (totaux, moyennes, taux, ratios...) sont calculées à partir de chiffres non arrondis, à l'exception des estimations désaisonnalisées. Ainsi, la somme des composantes individuelles arrondies n'est pas toujours égale au total publié.

Seasonal Adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods and cycles related to crops, production and retail sales associated with Christmas and Easter. It should be noted that the seasonally adjusted series contains irregular as well as longer-term cyclical fluctuations.

The seasonal adjustment program is a complicated computer program which differentiates between these seasonal, cyclical and irregular movements in a series over a number of years and, on the basis of past movements, estimates appropriate seasonal factors for current data. On an annual basis, the historic series of seasonally adjusted data is revised in light of the most recent information on changes in seasonality.

The seasonally adjusted series in this publication have been derived using the X-11-ARIMA method developed at Statistics Canada in 1980 to improve the accuracy of seasonal factor estimates. This method is a modified version of the X-11 variant of the Census Method II seasonal adjustment program of the U.S. Bureau of the Census. The modification involves using ARIMA (autogressive integrated moving average) models to produce twelve-month projections of the unadjusted data series; the projected data are then added to the series for purposes of seasonal adjustment. For a detailed description of the procedure, the reader is referred to the technical paper "The X-11 ARIMA/88 Seasonal Adjustment Method". Information regarding seasonal adjustment is also available from the Labour Force Survey Sub-division or the Time Series Research and Analysis Division, Statistics Canada.

Seasonally adjusted estimates of the <u>labour force</u> are derived by summing seasonally adjusted employment and seasonally adjusted unemployment.

Seasonally adjusted employment and unemployment totals for Canada are derived by the summation of the appropriate seasonally adjusted figures for mens 15-24, men 25 to 54, men 55 and over, women 15-24, women 25 to 54 and women 55 and over.

A harmonization process is applied to the seasonally adjusted series of <u>all</u> <u>national and provincial</u> employment series to correspond to the seasonally adjusted total employment series.

Seasonally adjusted <u>unemployment rates</u> are the seasonally adjusted unemployment levels expressed as a per cent of the seasonally adjusted labour force (i.e. the sum of the seasonally adjusted employment and unemployment levels).

The seasonally adjusted <u>participation rates</u> are the seasonally adjusted labour force estimates (i.e. the sum of the seasonally adjusted employment and unemployment levels) expressed as a per cent of the population.

The seasonally adjusted employment rates are the seasonally adjusted employment levels expressed as a per cent of the population.

The seasonally adjusted <u>part-time rates</u> are the seasonally adjusted part-time employment levels expressed as a per cent of the seasonally adjusted employment levels.

Désaisonnalisation

Les fluctuations des séries chronologiques économiques sont causées par des mouvements saisonniers, cycliques et irréguliers. Une série désaisonnalisée est une série dont on a éliminé les effets des mouvements saisonniers. Ces derniers sont causés par des événements annuels réguliers comme les changements de température, les vacances, les cycles agricoles, de productions et de ventes au détail durant la période de Noël et de Pâques. Il convient de noter que la série désaisonnalisée contient à la fois des fluctuations irrégulières et des fluctuations cycliques à long terme.

Le programme de désaisonnalisation est un programme informatique complexe qui permet de déceler les mouvements saisonniers, cycliques et irréguliers sur une période de plusieurs années et d'estimer, à la lumière des mouvements passés, les coefficients saisonniers appropriés pour l'année en cours. Sur une base annuelle, chaque série chronologique des données désaisonnalisées est révisée à la lumière des renseignements les plus récents sur les fluctuations saisonnières.

Les séries désaisonnalisées présentées dans cette publication ont été calculées à l'aide de la méthode X-11-ARMMI, mise au point à Statistique Canada en 1980 afin d'améliorer la précision des estimations des facteurs saisonniers. Cette méthode est une modification de la variante X-11 du programme de désaisonnalisation "Census Method II" du Bureau du recensement des État-Unis. Cette modification comprend l'utilisation de modèles ARMMI (autorégressif à moyennes mobiles intégré) afin d'établir des extrapolations de douze mois de la série d'origine; on désaisonnalise alors la série en lui ajoutant les valeurs extrapolées. Le lecteur intéressé trouvera une description détaillée de cette procédure dans le document technique intitulé "La méthode de désaisonnalisation X-11 ARMMI/88". On peut également obtenir des renseignements sur la désaisonnalisation en s'adressant à la Sous-division de l'enquête sur la population active ou à la Division des séries chronologiques - recherche et analyse, de Statistique Canada.

On obtient les estimations désaisonnalisées de la <u>population active</u> en faisant la somme des données désaisonnalisées sur l'emploi et le chômage.

Les totaux désaisonnalisés de <u>l'emploi</u> et du <u>chômage</u> pour le Canada sont tirés de la somme des chiffres désaisonnalisés pour les hommes âgés de 15 à 24 ans, de 25 à 54 ans, de 55 ans et plus ainsi que les femmes des trois même groupes d'âge.

Un processus d'harmonisation est appliqué aux séries désaisonnalisées sur toutes les séries de l'emploi au niveau <u>national et provincial</u> afin qu'elles concordent avec celles sur l'emploi total.

Les <u>taux</u> <u>de chômage</u> <u>désaisonnalisés représentent les niveaux</u> désaisonnalisés <u>du chômage exprimés en pourcentage des estimations</u> désaisonnalisées <u>de la population active (c.-à-d. la somme des niveaux</u> désaisonnalisés <u>de l'emploi et du chômage</u>).

Les <u>taux d'activité</u> désaisonnalisés correspondent aux estimations désaisonnalisées de la population active (c.-à-d. la somme des niveaux désaisonnalisés de l'emploi et du chômage) exprimées en pourcentage de la population.

Les <u>taux d'emploi</u> désaisonnalisés sont les niveaux désaisonnalisés de l'emploi exprimés en pourcentage de la population.

Les taux à temps partiel désaisonnalisés sont les niveaux désaisonnalisés de l'emploi à temps partiel exprimés en pourcentage des niveaux désaisonnalisés de l'emploi.

Seasonally adjusted unemployment, participation and employment rates are calculated using rounded to hundreds, seasonally adjusted data.

It should be noted that the seasonally adjusted series are revised each year to take into account current data and to generate new forecast factors for the next twelve months. The data are therefore subject to slight revisions in future issues of this publication.

DATA QUALITY

Non-Sampling Errors

Errors which are not related to sampling may occur at almost every phase of a survey operation. Interviewers may misunderstand instructions, respondents may make errors in answering questions, the answers may be incorrectly entered on the questionnaire and errors may be introduced in the processing and tabulation of the data. These are all examples of non-sampling errors.

Over a large number of observations, randomly occurring errors will have little effect on estimates derived from the survey. However, errors occurring systematically will contribute to biases in the survey estimates. Considerable time and effort is made to reduce non-sampling errors in the survey. Quality assurance measures are implemented at each step of the data collection and processing cycle to monitor the quality of the data. These measures include the use of highly skilled interviewers, extensive training of interviewers with respect to the survey procedures and questionnaire, observation of interviewers to detect problems of questionnaire design or misunderstanding of instructions, edits to ensure that data entry errors are minimized and coding and edit quality checks to verify the processing logic.

Survey Response

One major source of non-sampling error is the effect of non-response on survey results. Non-response is made up of two components: item non-response, and total non-response. Several methods are used to compensate for item non-response, such as deriving a suitable response based on other information collected in the survey, using data obtained from the respondent during a previous interview, or choosing a response from a respondent with similar demographic and socio-economic characteristics. Total non-response is handled by either using information from a previous interview or by weighting the results to compensate for the missing data.

The non-response rate for the Labour Force Survey is among the lowest in the world for a survey of this type. In 1996 the rate averaged about 6%.

Sampling Errors

The survey produces estimates based on information collected from and about a sample of individuals. Somewhat different estimates might have been obtained if a complete census had been taken using the same questionnaire, interviewers, supervisors, processing methods, etc. as those actually used in the survey. The difference between the estimates obtained from the sample and those resulting from a complete count taken under similar conditions is called the <u>sampling error</u> of the estimate. Since it is unavoidable that estimates from a sample survey are subject to sampling error, sound statistical practice calls for researchers to provide users with some indication of the magnitude of this sampling error. Approximate measures of sampling error accompany Labour Force Survey products and users are urged to make use of them while analysing the data.

Les taux de chômage, d'activité et d'emploi désaisonnalisés sont fondés sur des données désaisonnalisées arrondies en centaines.

Il importe de noter que les données désaisonnalisées sont révisées chaque année afin de tenir compte des données courantes et produire des coefficients d'extrapolation prospective pour les 12 prochains mois. Les données d'extrapolation prospective seront l'objet de légères révisions dans les éditions ultérieures de la présente publication.

QUALITÉ DES DONNÉES

Erreurs non dues à l'échantillonnage

Des erreurs qui ne sont pas reliées à l'échantillonnage peuvent se produire à presque toutes les étapes des opérations d'enquête. Les intervieweurs peuvent avoir mal compris les instructions, les enquêtés peuvent se tromper en répondant aux questions, les réponses peuvent être mal consignées sur les questionnaires et des erreurs peuvent être faites au moment du traitement et de la totalisation des données. Il s'agit là d'autant d'erreurs non dues à l'échantillonnage.

Lorsque le nombre d'observations est élevé, les erreurs aléatoires ont peu d'effet sur les estimations calculées à partir des résultats de l'enquête. Toutefois, les erreurs systématiques contribuent à biaiser les estimations. À chacune des étapes du cycle de collecte et de traitement des données, on applique des mesures d'assurance de la qualité pour contrôler la qualité des données. Au nombre de ces mesures figurent le recours à des intervieweurs hautement qualifiés, une formation poussée des intervieweurs concernant les procédures et le questionnaire de l'enquête, l'observation des intervieweurs en vue de cerner les problèmes liés à la conception du questionnaire ou à une mauvaise compréhension des instructions, des contrôles visant à réduire au minimum les erreurs de saisie des données ainsi que des vérifications du codage et des contrôles ayant pour but d'attester de la logique du traitement.

Taux de réponse à l'enquête

L'une des principales sources d'erreurs non dues à l'échantillonnage est l'effet de la non-réponse sur les résultats de l'enquête. Il y a deux sortes de non-réponse: la non-réponse à une ou plusieurs questions et la non-réponse totale. On a recours à diverses méthodes pour remédier au premier type de non-réponse. On peut imputer une réponse qui s'inspire d'autres données recueillies dans l'enquête, utiliser les données d'une interview antérieure ou prendre la réponse d'un enquêté qui présente des caractéristiques démographiques et socio-économiques semblables. Pour pallier la non-réponse totale, on utilise les données d'une interview antérieure ou on effectue une pondération pour compenser l'absence de données.

Le taux de non-réponse à l'enquête sur la population active est l'un des plus faibles au monde pour une enquête de ce genre. En 1996 le taux moyen était environ 6 %.

Erreurs d'échantillonnage

L'enquête permet de produire des estimations fondées sur les renseignements recueillis auprès d'un échantillon de personnes et concernant ces dernières. Les estimations obtenues seraient peut-être sensiblement différentes si on réalisait un recensement exhaustif en reprenant par exemple le même questionnaire, les mêmes intervieweurs et superviseurs et les mêmes méthodes de traitement que pour l'enquête elle-même. L'écart entre les estimations découlant de l'échantillon et celles que donnerait un dénombrement exhaustif réalisé dans des conditions comparables est appelé erreur d'échantillonnage de l'estimation. Comme il est impossible de soustraire à l'erreur d'échantillonnage les estimations découlant d'une enquête sur échantillon, les chercheurs, soucieux d'appliquer de saines pratiques sur le plan statistique, fournissent aux utilisateurs certaines indications quant à l'importance de l'erreur d'échantillonnage. Les produits de l'Enquête sur la population active sont assortis de mesures approximatives de l'erreur d'échantillonnage; nous recommandons vivement aux utilisateurs d'en tenir compte au moment d'analyser les données.

A measure of the sampling error is the standard error. This measurement is based on the idea of selecting several samples, although in a survey only one sample is drawn and information is collected on units in that sample. Using the sampling plan, if a large number of samples were to be drawn from the same population, then about 68% of the samples would produce a sample estimate within one standard error of the census value and in about 95% of the samples it will be within two standard errors of the census value.

Sampling variability can also be expressed relative to the estimate itself. The standard error as a percentage of the estimate is called the coefficient of variation (CV) or the relative standard error. For LFS estimates, the CV is used to give an indication of the uncertainty associated with the estimates. Probability statements can also be made about CVs; for example, if an estimate is 100,000 with a CV of 7%, the true (census) value will lie between 93,000 and 107,000 with 68% certainty, and between 86,000 and 114,000 with 95% certainty.

Small CVs are desirable since the smaller the CV the smaller the sampling variability is relative to the estimate. The CV depends on the size of the estimate, the sample size that the estimate is based on, and the distribution of the sample. Of two estimates, the one with the larger sample will likely have a smaller sampling error; and, of two estimates of the same size the one referring to a characteristic that is more clustered geographically will have a larger variability associated with it. In addition, estimates relating only to age and sex are usually more reliable than other estimates of comparable sample size because, in the LFS, the sample is calibrated by age, sex and geographic region to independent sources.

Approximate sampling variability tables

The following tables give approximate coefficients of variation as a function of the size of the estimate and geography. The rows give the geographic area of the estimate while the columns indicate the resulting level of accuracy in terms of the CV, given the size of the estimate. To determine the CV for an estimate of size x in an area A, look across the row for area A, find the estimate that is less than or equal to x. Then the title of the column will give the approximate CV. For example, to determine the sampling error for an estimate of 42.0 thousand unemployed in Manitoba in August 1996, we find the closest but smaller estimate of 15.0 thousand giving a CV of 10%. Therefore, the estimate of 42,000 unemployed in Manitoba has a CV of roughly 10%.

The tables are supplied as a rough guide to the sampling variability. The sampling variability is modelled so that, given an estimate, approximately 75% of the CVs will be less than or equal to the CVs derived from the table. There will, however, be 25% of the estimates that will have a CV somewhat higher than that given by the table.

Une mesure de l'erreur d'échantillonnage est l'erreur-type, établie sur le principe de la sélection d'échantillons multiples. On notera toutefois que dans les faits, un seul échantillon est prélevé dans une enquête et que les renseignements recueillis portent sur les unités de cet échantillon. Selon le plan d'échantillonnage, si l'on prélevait un grand nombre d'échantillons dans la même population, pour environ 68 % des échantillons, l'écart entre l'estimation d'échantillon et la valeur du recensement serait inférieur à une unité d'erreur-type, et pour environ 95 % des échantillons, l'écart serait inférieur à deux unités d'erreur-type.

La variabilité de l'échantillonnage peut aussi être définie par rapport à l'estimation elle-même. Lorsqu'elle est exprimée en pourcentage de l'estimation, l'erreur-type est appelée coefficient de variation (CV) ou erreur-type relative. Dans le cas des estimations de l'EPA, on se sert du CV pour donner un aperçu du degré d'incertitude associé aux estimations. Il est possible également de présenter, relativement aux CV, des mesures de probabilité. Par exemple, pour une estimation de 100 000 avec un CV de 7 %, la valeur vraie (d'un recensement) se situera entre 93 000 et 107 000, avec un degré de certitude de 68 %, et entre 86 000 et 114 000, avec un degré de certitude de 95 %.

De faibles CV sont préférables; en effet, moins le CV sera élevé, plus faible sera la variabilité de l'échantillonnage par rapport à l'estimation. Le CV est fonction de la taille de l'estimation, de la taille de l'échantillon sur lequel se fonde l'estimation ainsi que de la répartition de l'échantillon. De deux estimations données, celle qui se fonde sur l'échantillon le plus important présentera probablement l'erreur d'échantillonnage la plus faible. Pour deux estimations de taille identique, celle qui a trait à une caractéristique plus regroupée géographiquement aura une variabilité plus prononcée. De plus, les estimations qui ont trait uniquement à l'âge et au sexe sont habituellement plus fiables que d'autres estimations fondées sur des échantillons de taille comparable parce que l'échantillon de l'EPA est calibré en fonction de l'âge, du sexe et de la région géographique, par rapport à des sources indépendantes.

Tableaux des degrés approximatifs de variabilité de l'échantillonnage

Les tableaux qui suivent fournissent des coefficients de variation approximatifs selon la taille des estimations et la région géographique. Les lignes correspondent à la région de l'estimation et les colonnes, au degré de précision exprimé en CV, selon la taille de l'estimation. Pour déterminer le CV d'une estimation x dans la région A, suivez la ligne de la région A jusqu'à l'estimation la plus proche de x sans la dépasser. Le titre de la colonne indiquera le CV approximatif. Par exemple, pour connaître l'erreur d'échantillonnage d'une estimation de 42 000 chômeurs au Manitoba en août 1996, on constate que l'estimation inférieure la plus proche, de 15 000, donne un CV de 10 %. L'estimation de 42 000 chômeurs aura donc un CV d'environ 10 %.

Les tableaux donnent une idée approximative de la variabilité de l'échantillonnage. Cette dernière est modélisée pour que le CV soit inférieur ou égal au CV du tableau dans environ 75 % des cas, pour une estimation donnée. Dans 25 % des cas, l'estimation sera néanmoins légèrement plus élevée que celle indiquée au tableau.

Weighting

The data are weighted to independently derived population estimates produced each month by province, age, and sex. These estimates are shown in a number of tables in this report and are subject to revision after each Census. The weighting process takes into account non-response, growth in sample size and changes in the distribution of dwellings within provinces. For further information about the weighting process, contact Labour Force Survey Sub-Division, Statistics Canada, Ottawa, K1A 0T6.

Reference and Release Dates

As mentioned previously, the estimates derived from the Labour Force Survey refer to a specific week each month. The following table gives the reference weeks and the release dates for the years 1996, 1997 and 1998.

Pondération

Les données sont pondérées en fonction d'estimations démographiques indépendantes déterminées chaque mois par province, par âge et par sexe. Ces estimations sont présentées dans un certain nombre de tableaux de la présente publication et font l'objet d'une révision après chaque recensement. Le processus de pondération tient compte de la non-réponse, de l'expansion de l'échantillon et des variations dans la répartition des logements dans les diverses provinces. Pour de plus amples renseignements au sujet du processus de pondération, consulter la Sous-division de l'enquête sur la population active, Statistique Canada, Ottawa, K1A 0T6.

Dates de référence et du communiqué

Comme nous l'avons mentionné plus haut, les estimations tirées de l'enquête sur la population active se rapportent à une semaine précise de chaque mois. Le tableau ci-après indique les semaines de référence et les dates du communiqué pour les années 1996, 1997 et 1998.

Don't let the changing world take you by surprise!

Ne soyez pas dépassé par les événements!

An aging population. Lone-parent families. A diverse labour force. Do you know how today's social changes will affect your future ... your organization ... and your family?

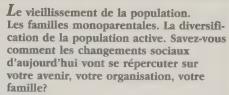

Keep pace with the dramatic shifts in Canada's evolving social fabric with Statistic Canada's best-selling quarterly, Canadian Social Trends. With vast and varied reports on major changes in key social issues and trends, this periodical incorporates findings from over 50 national surveys.

Written by some of Canada's leading-edge social analysts, Canadian Social Trends combines painstaking research with dynamic prose on topics like ethnic diversity, low-income families, time-crunch stress, violent crime and much more — all in a colourful, easy-to-read, magazine format.

A lasting record of changing times!

Join the thousands of business and policy analysts, social-science professionals, and academics who trust *Canadian Social Trends* to demystify the causes and consequences of change in Canadian society. Don't miss a single issue — subscribe today.

Canadian Social Trends (catalogue number 11-0080XPE) is \$34 (plus GST and applicable PST) annually in Canada, US\$41 in the United States and US\$48 in other countries.

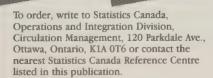

Suivez l'évolution spectaculaire de la société canadienne grâce à *Tendances sociales canadiennes*, une publication trimestrielle de Statistique Canada. Avec des articles vastes et variés sur les principaux changements caractérisant les questions et les tendances sociales principales, cette publication intègre les résultats de plus de 50 enquêtes nationales.

Certains des analystes sociaux les plus reconnus du Canada rédigent des articles dans *Tendances sociales canadiennes*. Ils présentent les résultats de recherches minutieuses dans un style attrayant pour des sujets tels que la diversité ethnique, les familles à faible revenu, le stress dû au manque de temps, le crime et bien d'autres encore dans une revue haute en couleur et de lecture aisée.

Un dossier permanent d'une époque en évolution!

Des milliers d'analystes des entreprises et des politiques, de professionnels des sciences sociales et d'universitaires lisent *Tendances sociales canadiennes* pour identifier les causes et les conséquences de l'évolution de la société canadienne. Ne manquez pas un numéro, abonnez-vous dès aujourd'hui.

L'abonnement annuel à Tendances sociales canadiennes (n° 11-0080XPF au catalogue) coûte 34 \$ (plus la TPS et la TVP en vigueur) au Canada, 41 \$ US aux États-Unis et 48 \$ US dans les autres pays.

If more convenient, fax your order to 1-613-951-1584 or call toll-free 1-800-267-6677 and use your VISA or MasterCard. Via Internet: order@statcan.ca

Pour passer votre commande, écrivez à Statistique Canada, Division des Opérations et de l'intégration, Direction de la circulation, 120, av. Parkdale, Ottawa (Ontario) K1A 0T6, ou adressez-vous au centre de services-conseils de Statistique Canada le plus proche de chez vous et dont la liste figure dans cette publication.

Vous pouvez aussi envoyer votre commande par télécopieur, au 1-613-951-1584, ou téléphoner sans frais au 1-800-267-6677 et donner votre numéro de carte VISA ou MasterCard. Via l'Internet: order@statcan.ca

Canada: A Portrait

A Memorable Journey Through Canada

A book to captivate everyone, Canada: A Portrait is a compelling record in words and pictures of the excitement and diversity of present-day Canada. This all-new edition of Statistics Canada's proven bestseller features a striking full-colour dustjacket reproduction of Sweetgrass, the rich impressionistic painting by Canadian artist Frank Mayrs. Once you open its appealing cover, you will discover that Canada: A Portrait not only delights the eye, it stimulates the imagination. Each page is brimming with lively and intriguing facts, bringing to life the personality and charisma of Canada in a clear, easy-to-read and entertaining narrative.

Un portrait du Canada

Un voyage mémorable à travers le Canada

Un portrait du Canada captivera tout le monde. C'est un recueil irrésistible, en mots et en images, de tout ce qui fait le dynamisme et la diversité du Canada d'aujourd'hui. Cette nouvelle édition de l'indiscutable best-seller de Statistique Canada offre, sur la jaquette, un magnifique paysage impressionniste, intitulé Sweetgrass, de l'artiste canadien Frank Mayrs. Dès la première page, vous serez fasciné par la beauté des images et du texte et vous laisserez vagabonder votre imagination. Chaque page regorge de faits vivants et intrigants donnant vie au caractère et au magnétisme du Canada dans une langue claire, simple et prenante.

From the important to the whimsical...

Canada: A Portrait presents you with the perfect opportunity to explore Canada at your leisure with just the turn of a page. Investigate the diverse regions of Canada from Mount Logan in the Yukon to the St. John River in New Brunswick. Delve into the heartbeat of Canada's society: Who are we? Where do we live? What do we believe in? See how the economy is evolving and what makes it tick. Learn about the activities enjoyed by today's Canadians, such as opera and hockey and home computers. Canada: A Portrait offers a complete examination of this unique country and reflects many interesting perspectives.

The Land, The People, The Society, Arts and Leisure, The Economy and Canada in the World

Six chapters provide a guided tour of both the physical and the human landscape of Canada. Each chapter is enriched with personal insights on "being Canadian," shared with you by such eminent people as Myriam Bédard, Gerhard Herzberg and Joe Schlesinger and is adorned with a gallery of imaginative pictorial images.

Share the Canada: A Portrait experience with your family, friends and colleagues

Its charming format, rich design, intriguing content and attractive price make this a keepsake volume, ideal both to give and to receive.

Canada: A Portrait is available for only \$39.95 in Canada (plus CST, applicable PST and shipping and handling), US \$51.95 in the United States and US \$59.95 in other countries. To order, write to Statistics Canada, Operations and Integration Division, Circulation Management, 120 Parkdale Avenue, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication. Call toll-free: 1-800-700-1033 and use your Visa and MasterCard or fax your order to (613) 951-1584.

De l'important au fantaisiste...

Un portrait du Canada vous permet de visiter le pays durant vos moments libres simplement en tournant les pages. Du mont Logan (Yukon) à la rivière Saint-Jean (Nouveau-Brunswick), tâtez le pouls des différentes régions du Canada. Fouillez au coeur même de la société canadienne : Qui sommes-nous? Où vivons-nous? Quelles sont nos croyances? Voyez comment l'économie évolue et pourquoi elle tourne. Découvrez les activités préférées des Canadiens d'aujourd'hui : de l'opéra au hockey jusqu'à l'ordinateur familial. Un portrait du Canada offre un examen complet de ce pays unique reflétant des perspectives intéressantes.

Le territoire, La population, La société, Les arts et les loisirs, L'économie et Le Canada dans le monde

Un tour guidé du paysage physique et humain du Canada vous est offert en six chapitres, chacun est parsemé d'oeuvres pleines d'imagination et est enrichi d'un message personnel sur le fait «d'être Canadien». Ces messages sont partagés par d'éminents Canadiens tels que Myriam Bédard, Gerhard Herzberg et Joe Schlesinger.

Partagez cette expérience avec votre famille, vos amis et vos collègues

Son format attrayant, son design riche, son contenu intrigant et son prix alléchant font d'**Un portrait du Canada** un cadeau idéal à donner ou à recevoir.

Un portrait du Canada est en vente à seulement 39,95 \$ au Canada (TPS, TVQ et frais de port et de manutention applicables en sus), 51,95 \$ US aux États-Unis et 59,95 \$ US dans les autres pays. Pour commander, écrivez à Statistique Canada, Division des opérations et de l'intégration, Direction de la circulation, 120, avenue Parkdale, Ottawa (Ontario) K1A 0T6 ou communiquez avec le Centre de consultation régional de Statistique Canada le plus près (la liste figure dans la présente publication). Ou encore, téléphonez sans frais au 1-800-700-1033 et portez les frais à votre compte VISA ou MasterCard ou télécopiez votre commande au (613) 951-1584.
